

"To make a true difference we must act globally because oceans do not recognize political borders"

OUR MISSION

Sea Save Foundation stands witness to the health of the oceans and the threats they face, we document problems and develop solutions, arm people with knowledge, and tools so they can make a difference.

With the public as our ally, we go to the United Nations and other global bodies to effect international change. We attend these meetings so we can offer creative, economically viable, sustainable, and environmentally friendly plans to decision-makers.

SDGS: ROADMAP TO SUCCESS

The Sustainable Development Goals (SDGs) are a set of 17 goals established by the United Nations in 2015 to address global challenges such as poverty, inequality, climate change, and environmental degradation by 2030. They aim to promote prosperity while protecting the planet, and are critical for ensuring a sustainable future for all.

SDG #14 UNPACKED

SDG 14, "Life Below Water," focuses on conserving marine environments and sustainably using ocean resources, aiming to cut pollution, protect habitats, tackle acidification, manage fishing, and enforce sea laws. The 2023 ratification of the High Seas Treaty notably advanced these objectives. Despite less funding, SDG 14's stewardship over Earth's extensive oceans has yielded substantial progress. Nonetheless, ongoing challenges with pollution and acidification stress the need for escalated global cooperation as the 2030 deadline approaches.

SDG #14 Targets
